1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-4, drawn to an apparatus for calibrating vacuum nozzle positions in a component placement machine, classified in class 73, subclass 1.79.
  - II. Claims 5-11, drawn to a method for calibrating vacuum nozzle positions in a component placement machine, classified in class 73, subclass 1.79.

2. The inventions are distinct, each from the other because:

Inventions group 2 and group 1 are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus such as not requiring a housing structured as set forth in group 1.

3. Because these inventions are distinct for the reasons given above and the search required for Group 1 is not required for Group 2, and vice-versa, restriction for examination purposes as indicated is proper.

Art Unit: 2856

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
